Education

University of Wisconsin-Madison *09/2021*
Ph.D. in Computer Sciences, Minor in Statistics
Advisor: Professor Xiaojin (Jerry) Zhu

University of Wisconsin-Madison *05/2018*
M.S. in Computer Sciences

Huazhong University of Science and Technology *06/2016*
B.E. in Computer Science and Technology

Research Interests

My research interest lies broadly in machine learning and artificial intelligence. My current research focuses on natural language processing (NLP) and its applications. Specifically, I try to develop modern NLP models and create large-scale productions using NLP techniques. Another line of my research is adversarial sequential decision making. In particular, I focus on analyzing the adversarial vulnerability/robustness of models in typical sequential decision making problems, including multi-armed bandit, reinforcement learning, optimal control systems, and multi-agent game-theoretical learning scenarios. I am also interested in solving real-world problems related to unsupervised learning (e.g., dimensionality reduction, clustering, social networks etc.), deep neural networks, and differentially private machine learning.

Work Experience

Senior Data & Applied Scientist, Microsoft *Since 10/2021*

- Focus on Natural Language Processing (NLP), e.g., design new model distillation techniques for large-scale NLP models, deploy existing model distillation techniques into products.
- Develop machine learning pipelines and infrastructures to help product teams easily turn outcomes from research teams into practical applications and solve real-world problems.

Research Intern, IBM Research *06-08/2020*

- Built a two-stage machine learning model based on Cycle Generative Adversarial Network (Cycle-GAN) and object detection techniques to identify buildings on the satellite imagery data of American cities.
- Developed an iterative training procedure based on the object detection algorithm YOLO to augment the labels in the training data. The model increased the total amount of labeled buildings from 20K to 80K.
- Applied Cycle-GAN to transform imagery data into rasterized maps.

Applied Scientist Intern, Amazon *06-09/2019*

- Developed a student identification model using the Gradient Boosted Tree (GBT) algorithm.
- Carried out an end-to-end machine learning pipeline, including data acquisition, model training, hyper-parameter tuning, post-processing of predictions, and model testing.
- Evaluated the model performance on Amazon Prime data and achieved 85% accuracy.

Research Intern, Symantec Research Labs (NortonLifeLock) *05-08/2018*

- Proposed a federated machine teaching framework that coordinates the training process of local nodes to jointly teach some desired model, while respecting the local data privacy during the communication between nodes.
- The work was published in the International Joint Conference on Neural Networks (**IJCNN**).

Research Scholar, Cornell University *07-08/2015*

- Proposed a nonlinear dimensionality reduction algorithm, which is able to preserve both the global and the local structure of high-dimensional data after reduction.
- The work was published in the International Frontiers of Algorithmics Workshop (**FAW**), and the extended version appeared in the Theoretical Computer Science (**TCS**).
- Advisor: Professor Kun He & Professor John E. Hopcroft.

Research Assistant, John Hopcroft Lab @ Huazhong University *02/2013-05/2016*

- Focused on unsupervised learning, including clustering and dimensionality reduction.
- Advisor: Professor Kun He.

Honors and Awards

Student Travel Award, NeurIPS	*2019*
Top 50% Reviewer, NeurIPS	*2019*
Student Travel Award, GameSec	*2018*
Honorarium Award, GameSec Special Track	*2018*
Student Travel Award, AISTATS	*2018*
UW CS Summer Research Award	*2017*
Outstanding Bachelor Thesis Award	*2016*
CCF Outstanding Undergraduate Award	*2015*
Academic Excellence Scholarship	*2014*
Outstanding Student Leader Award	*2014*
China National Scholarship Award	*2013*

Academic Service

Program Committee: ECAI23, ACML23, ACML22, AAAI22, ACML21, AAAI21, ACML20, AAAI20, ACML19, AAAI19
Conference Reviewer: NeurIPS23, ICML23, CogSci23, AISTATS23, ICLR23, NeurIPS22, CogSci22, ICML22, AISTATS22, ICLR22, NeurIPS21, ICML21, AISTATS21, ICLR21, NeurIPS20, ICML20, AISTATS20, NeurIPS19, ICML19, AISTATS19
Journal Reviewer: TMLR, TON, TPAMI, IEEE Access, Machine Learning
Student Volunteer: AISTATS18

Student Contest

Student Cluster Competition of Super-Computing Conference 2014 *2014*
Ranked No. 5 for overall and No. 3 for Linpack

Fifth National Undergraduate Mathematical Contest of China *2013*
First-Class Award in Hubei Province

Talks & Presentations

Adversarial Attacks on Adversarial Bandits. *02/19/2023*
Microsoft Azure AI Group

Adversarial Example Attacks and Defenses in NLP. *09/06/2022*
Microsoft Azure AI Group

Adversarial Machine Learning in Sequential Decision Making. *11/05/2021*
Microsoft Azure AI Group

Data Poisoning against Differentially-Private Learners: Attacks and Defenses. *08/14/2019*
IJCAI 2019 at China, Macau.

Machine Teaching Theory and Its Applications. *12/26/2018*
Huazhong University of Science and Technology.

Data Poisoning Attacks in Contextual Bandits. *10/30/2018*
GameSec 2018 at University of Washington.

Teacher Improves Learning by Selecting a Training Subset. *04/20/2018*
1st IFDS Student Workshop at University of Wisconsin-Madison.

Skills & Expertise

Programming Skills: Python, Pytorch, SQL, Matlab, C, C++, R, AMPL, Verilog
Machine Learning: Adversarial Machine Learning, Multi-armed Bandit, Reinforcement Learning, Natural Language Processing, Privacy-preserving Machine Learning, Dimensionality Reduction, Machine Teaching
